OASIS and coding go hand-in-hand and their accuracy is critical to your agency's success! Missing just one step could negatively impact your bottom line and quality outcomes.

Since OASIS-C was implemented in January 2010, there have been numerous clarifications and significant revisions to the guidance. Case mix scores have dropped, indicating that clinicians may not understand how to score certain OASIS data items, and the 2013 Final Rule eliminated case mix points for resolved conditions listed in the payment diagnosis slot. Find out the most up-to-date guidance, ways to ease the financial burden of the M1024 change, and how to improve your accuracy and consistency by attending the full-day intermediate-level OASIS-C workshop.

Attend the two-day, in-depth, and interactive coding workshop, designed for new and experienced coders, and advance your skills to the next level. Enhance your critical thinking, and become a more proficient coder. Get the important details that will keep coding errors down, reimbursement up, reduce the risk of an audit, and protect your agency, if audited.

Though the implementation of ICD-10 has been postponed until 10/01/14, CMS and AHIMA have advised that coders remain vigilant in ICD-9 coding and that agencies continue with their transition efforts. As a bonus, an introduction to ICD-10 will be included. Learn how this code set compares to ICD-9, new features of the system, its structure, format of the codes, and training strategies.

Take advantage of this great opportunity to attend back-to-back comprehensive OASIS and coding workshops that will enhance your skills, improve patient outcomes, ensure compliance with the regulations, and maximize your agency's revenue by reducing costly errors!
